I am an experienced software developer and systems architect, with a bachelor's degree in computer science from the University of Copenhagen.

Work Experience

2021 → Present Senior Software Developer at CSIS A/S.
Core Team engineer at Vivino, where my primary responsibilities include maintaining and improving the core platform backing our HTTP APIs.

2015 → 2021 Senior Software Developer at CSIS A/S.
My primary responsibilities include the overall architectural health of CSIS' in-house software, helping the rest of development with architectural/technical issues, as well as day to day development work.

Major achievements include architecting and implementing the new E-mail Fraud Protection product backend, and the move of most of our in-house developed software to Google Cloud.

2008 → 2015 Software Developer at CSIS A/S.
My primary role were the design and development of in-house backend-systems. I also worked to improve the in-house development processes, by introducing automated software testing, automated deployments, and code reviews.

Major achievements include implementing the data-processing backend for our new Incident Response Toolkit, automating a lot of existing manual processes freeing our consultants from that.

Also re-architected and re-implemented the Secure DNS backend-systems and timeline database, enabling healthy long-term growth of the product.

2005 → 2008 Software Developer at Netpointers Technologies A/S. My primary role was development of the in-house web-crawler and its customer-facing report-generating web-site.

2000 → 2005 Part-time Developer and Sytem Administrator at varios companies.

Skills

Software Development

Systems Architecture

Database Design

Technologies

Know Well Python, PostgreSQL, Linx.

Know Some Rust, Go, C, Kubernetes, MySQL, Redis.

2008 Bachelor of Science in Computer Science from the University of Copenhagen (I took my last course years earlier, but this is when I got the piece of paper.)

1998 Borupgaard Amtsgymnasium – High school.
